

AI Agents that Automate.
Systems that Scale.

0G LABS GLOBAL HACKATHON

Verifiable yield optimization for the AI-native Web3.

Mainnet-first optimizer, anti-hallucination guardrails, 0G proof trail, Sovereign Memory, Hallucination Blacklist, Multiverse Stress Test, frictionless judge review, Agent NFT minting, and strategy marketplace adoption.

0G Mainnet default

0G Storage + ProofRegistry

Sovereign Memory

Blacklist + Stress Test

Agent NFT + Marketplace

Live app: yieldboost-ai.vercel.app/judge

AI yield advice is easy to generate. It is hard to verify.

AI can hallucinate

Finance agents need guardrails before an output is treated as a trusted strategy.

Opaque recommendations

Most dashboards show a route, but not the wallet snapshot, proof trail, and validation context behind it.

Temporary strategy state

A completed strategy should become a portable on-chain artifact, not disappear as a UI-only result.

YieldBoost AI turns an optimization into a visible chain of custody: compressed input, runtime guardrail, 0G Storage, ProofRegistry anchor, Agent NFT, and marketplace adoption.

One click produces a strategy, a proof, and a review surface.

1

Connect wallet

User enters the normal dashboard flow with an active wallet context.

2

Optimize route

Portfolio snapshot is compressed and routed through cache, embeddings, compute, and auditor checks.

3

Anchor proof

Result is stored through 0G Storage and anchored through ProofRegistry.

4

Review or mint

Judge Mode audits the proof. User can mint and list a Strategy Agent NFT.

Projected APY

23.84%

latest proof snapshot

Confidence

96%

route scoring

Guardrail

100

Integrity Auditor score

Agent NFTs

3

mainnet minted strategies

The system is built around a verifiable data path.

The key design choice: AI output is treated as a proposal until it passes guardrails and becomes a durable, wallet-scoped proof artifact.

Sovereign Memory

Agent state snapshots are persisted on OG Storage so the strategy context can be rehydrated across sessions.

Hallucination Blacklist

Rejected input and output pairs are indexed before future inference, turning repeated failure modes into pre-inference blocks.

Multiverse Stress Test

Historical replay turns market slices into Integrity Report Cards backed by OG Storage and on-chain validation evidence.

Audit-first UX: no wallet, no faucet, no rerun.

Hard-locked demo wallet

0x8a3c7524Aaed081825aC88eC7f4cCECFc583ee7D

Mainnet-first, testnet switchable

Reviewers can compare networks without leaving the audit page.

Direct explorer path

Latest storage tx, ProofRegistry anchor, Sovereign Memory CID, blacklist CID, stress report CID, Agent NFT mint tx, marketplace, oracle, and contract addresses are surfaced in one place.

● MAINNET REVIEW

Mainnet review starts here.
Latest proof-backed snapshot, APY lift, and verification payload.

APY lift
12.38 -> 23.84%

Proof history
Live runs

Live contracts and latest proof trail are already on 0G mainnet.

ProofRegistry

0x8e63e117E71A80Cfc10fDF375F079e2e29cd7D7D

Anchors proof metadata and emits the reviewable proof event.

GlobalBlacklistRegistry

0xbc576EA5a68ED9d217299c107C801445e9A5a7BE

Mainnet registry for public rejection anchors from the Hallucination Blacklist layer.

ValidationRegistry

0x62aa83b0A610BE298dF08004d764229B8f2aC219

Mainnet registry for Multiverse Stress Test report anchors and integrity validation evidence.

YieldStrategyINFT

0xb264D861264B0e4f8fb98A61B7694BA8a3B6BBE3

Mainnet Agent NFT contract for strategy ownership.

Attestation Oracle

0x216E7880D64D94335B583c539802d3e61958d4A2

Registers verified attestation hashes before INFT verification is marked on-chain.

Strategy Marketplace

0x48F989C7f41056509980731C1b4D59164C0C1A40

Mainnet adoption contract for listed proof-backed Strategy NFTs.

Latest ProofRegistry tx

0xcb0bb6f4f61de4a2e8f7e29ddbbb1dd56814ed2eee4731450669756006a02f4

Latest tested mainnet proof anchor from the product flow.

Latest Agent NFT mint tx

0x2d4e074e9239f17db837fdfcc5ffa77393f292b7699836a79da260aefdddc18

Token #4 minted to the connected demo wallet during live validation.

YieldBoost hardens inference before and after every proof write.

Sovereign Memory

Latest agent state is snapshotted to OG Storage so verified context survives past the session window.

Hallucination Blacklist

Known-bad patterns are checked before new inference so repeated hallucinations can be rejected early.

Multiverse Stress Test

Historical replay compares standard output versus audited decisions and stores an Integrity Report Card.

Integrity Auditor

Checks AI recommendations against the real snapshot before proof writing, memory sync, blacklist promotion, or NFT minting.

1

Pre-check

Blacklist lookup before inference

2

Audit

Deterministic portfolio sanity checks

3

Persist

Proof + Sovereign Memory on OG

4

Replay

Stress test and report card validation

Optimization results become ownable agent artifacts.

After a proof-backed optimization, the user can mint the strategy through YieldStrategyINFT. The NFT is not the proof itself; it is the portable strategy artifact linked to the verified runtime output.

Minted to the connected wallet

Agent ownership follows the user wallet, not the server signer.

Marketplace adoption

Listed strategy NFTs can be inspected through proof metadata before adoption.

Auditor-gated mint

Rejected recommendations do not enter the proof-to-NFT path.

From verifiable optimizer to Proof-of-Optimization economy.

Phase 1: Mainnet proof product

Live proof trail, Judge Mode, Integrity Auditor, Agent NFT minting, marketplace, and dual-network review.

Phase 2: \$YA0G reward logic

Reward high-quality optimization events backed by ProofRegistry and measurable outcome metadata.

Phase 3: Mining by optimization quality

Proof-of-Optimization weights verified runs by confidence, impact, and durable proof coverage.

1

Run

User optimizes portfolio

2

Guardrail

Integrity Auditor approval

3

Verify

0G Storage + ProofRegistry

4

Own + adopt

Agent NFT marketplace

YieldBoost AI is strongest as a mainnet-live verifiable finance product: AI recommendations with a proof trail judges can inspect in seconds.
